

FieldQ Named As Outstanding Product

The first year of FieldQ has seen a warm welcome from the World's technical press covering process control. Starting right from the launch, Plant & Control Engineering in the UK hailed the introduction of FieldQ with the headline "Valve solution is very clever indeed", particularly stressing the IPT Intelligent Position Tracking and the reductions achievable in installation costs.

Control Engineering Europe in May 2003 asked "Mirror, mirror on the wall, who has the greatest rack-and-pinion actuator of all?" and naturally suggested the FieldQ, based on the proven highly reliable EI-O-Matic actuator. The editor saw the major improvement with the FieldQ design as integration of the typical external accessories around an actuator within the housing, protecting them from damage, misuse and environmental corrosion.

Later in the year Valve World praised the EI-O-Matic engineers for creating a new product "that will definitely turn heads. The FieldQ is nothing short of an exciting new concept in the world of valve automation."

Over the whole of 2003 the FieldQ was well received all around the World – finally achieving an award for being one of the "Breakthrough Products of the Year" from Processing Magazine in the USA. Particular interest here was in the digital communications options available, AS-I bus, Profibus DP and PA, and FOUNDATION fieldbus.

Emerson Valve Automation always knew that FieldQ was a winning concept and product range – it is reassuring to see that the technical press also agree.
